DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING (AIML)

S. R. K. R. ENGINEERING COLLEGE BHIMAVARAM

CERTIFICATE

This is to certify that this is a Bonafide work on “**FINDMYHOME WEBSITE**” and has been submitted by K.Dhanush 22B91A6187, M.Swamy 22B91A6196, M.Rahul 22B91A61A5, P.Harish 22B91A61C2 as a **MEAN Stack Technology (Module – I)** laboratory report, in partial fulfilment of the requirements for the award of the Degree of Bachelor of Technology in Computer Science and Engineering (AIML), during the academic year 2024-2025. The candidate/s worked right under my supervision and guidance.

Head of the Department

ACKNOWLEDGEMENT

We take immense pleasure in thanking **Prof. K. Murali Krishnam Raju**, beloved principal of S.R.K.R Engineering College, Bhimavaram, **Dr. Bh. V. S. R. Raju** esteemed Head of the Department and **Dr. G N V G Sirisha** program coordinator (AIML), for having permitted us to carry out mini project work in MEAN Stack Technology. We wish to express our deep sense of gratitude especially to our project guides **Dr. K Aruna Kumari**, Associate Professor and **Miss. Ch Suma**, Assistant Professor, for their guidance and useful suggestions, which helped us in completing the work, on time. Finally, yet importantly, we would like to express our heartfelt thanks to our beloved parents, faculty, my friends/classmates for their help, and our wishes for the successful completion of this project.

K.Dhanush	22B91A6187
M.Swamy	22B91A6196
M.Rahul	22B91A61A5
P.Harish	22B91A61C2

ABSTRACT

This project proposes the development of **FindMyHome**, an online room rental platform built using the MEAN stack (MongoDB, Express.js, Angular, Node.js). The platform bridges the gap between property owners and tenants by eliminating the need for brokers, thereby promoting transparency and direct interaction.

The system allows property owners to post listings through a simplified interface, including essential details such as property type (Single Room, 1RK, 1BHK, 2BHK, 3BHK), rent, furnishing status, and availability. Tenants can search and filter properties based on multiple parameters such as BHK type, budget range, tenant preference, furnishing status, and availability. Listings are also grouped under curated collections like “For Family,” “For Single Men/Women,” and “Company Lease.”

FindMyHome features dedicated login modules for users and owners with secure authentication. An in-site search bar enables location-based queries, and tenants can raise maintenance requests directly through their dashboards. Real-time updates on listings and activities enhance user interaction.

The frontend employs responsive design principles and FontAwesome icons for improved user experience across devices. Clean architectural planning, modular backend development, and intuitive Angular components contribute to performance, scalability, and security.

FindMyHome focuses on solving rental market inefficiencies by offering an end-to-end solution that supports verified listings, secure user access, and seamless property management. The success of the platform will be evaluated based on user engagement, listing quality, and reduction in broker dependency across urban and semi-urban regions.

TABLE OF CONTENTS

Sl. No.	CONTENTS	Page No.
1.	MODULES	2
2.	SOFTWARE REQUIREMENTS	3
3.	TECHNICAL STACK	4-6
4.	INTRODUCTION	7
5.	SAMPLE CODE	8-33
6.	SCREENSHOTS	33-40

MODULES

- Home page
- User Login page
- User Sign-up page
- Post Property page
- Services Page
- About page
- Maintenance page
- Updates page
- Booking page
- Room Details page

SOFTWARE REQUIREMENTS

1. Text Editor: Visual Studio Code, Notepad
2. Front End: HTML, CSS, JavaScript
3. Back End: Angular js
4. Databases: MongoDB
5. Internet Browser: Google Chrome

TECHNICAL STACK

1. Frontend Development:

HTML (HyperText Markup Language)

It is the standard markup language used to structure and display content on the web. It organizes information into elements like headings, paragraphs, images, lists, and links using nested tags. HTML forms the semantic foundation of web pages, making them readable by browsers and accessible to users. It plays a crucial role in defining the hierarchy and meaning of content. HTML5 introduced support for multimedia, APIs, and improved semantics. It enables search engine optimization (SEO) through proper tag usage. HTML is also essential for form creation, which enables user interaction. It's designed to be extensible and works seamlessly with CSS and JavaScript. Whether it's a simple page or a complex application, HTML serves as the backbone of web development. As the web evolves, HTML remains a key technology for creating structured and interactive experiences.

CSS (Cascading Style Sheets)

It is the language responsible for defining the appearance and layout of web content. It works alongside HTML to control design elements like color, typography, spacing, and alignment. CSS uses selectors to target HTML elements and applies a set of rules to style them. It supports responsive design via media queries, adapting layouts across various screen sizes. Features like Flexbox and CSS Grid make it easier to build complex and fluid layouts. CSS also supports animations, transitions, and transformations for dynamic interfaces. It allows for separation of concerns by keeping styling independent from HTML content. The cascading nature allows multiple stylesheets and rules to work together through specificity and inheritance. CSS3

introduced modern visual enhancements that elevate user experiences. Overall, CSS is critical for ensuring consistency, accessibility, and visual engagement in web design.

JavaScript

JavaScript is a powerful, high-level programming language that brings interactivity to web pages. It runs in the browser and enables dynamic behaviors such as form validation, content updates, and animations. JavaScript can manipulate the DOM (Document Object Model) to alter page content and layout in real-time. It supports event-driven programming, allowing developers to handle user inputs and actions efficiently. With asynchronous features like Promises and `async/await`, JavaScript handles API calls and real-time data fetching smoothly. It has a rich ecosystem, with libraries (e.g., jQuery) and frameworks (e.g., React, Vue, Angular) that accelerate development. JavaScript is also used on the server side via Node.js, enabling full-stack development with one language. It supports object-oriented and functional programming paradigms, offering flexibility. JavaScript is constantly evolving with new ECMAScript standards that add modern features. It is indispensable for creating engaging, dynamic, and fully functional web applications.

2. Backend Development:

AngularJS

AngularJS is an open-source JavaScript framework developed by Google for building dynamic web applications. It extends HTML with custom directives and enables declarative data binding, simplifying UI development. AngularJS follows the MVC (Model-View-Controller) design pattern, promoting organized and modular code. Its powerful two-way data binding syncs model and view automatically, reducing boilerplate code. It includes dependency injection, which facilitates testing and reusable components. AngularJS supports routing, enabling the creation

of single-page applications (SPAs) with client-side navigation. It enhances HTML's capabilities by turning it into a more expressive and readable format. AngularJS provides services and factories for data operations, promoting clean separation of logic. Though it's now succeeded by Angular (2+), AngularJS remains significant in full-stack JavaScript development. It allows seamless integration with REST APIs, making it an effective framework for frontend-backend interaction in modern web apps.

3. Database

MongoDB

MongoDB is a NoSQL, document-based database designed for flexibility, scalability, and performance. It stores data in JSON-like BSON documents, allowing nested structures and dynamic schemas. This makes it ideal for applications with unstructured or evolving data requirements. MongoDB scales horizontally through sharding, supporting large-scale applications with distributed data. It supports powerful querying with filters, aggregations, and indexing for high performance. MongoDB offers features like replication, automatic failover, and backups to ensure high availability. It's schema-less, allowing rapid development without rigid table definitions. Developers can work with MongoDB using native drivers in languages like JavaScript (Node.js), Python, Java, and more. Its integration with popular frameworks and cloud services enables robust data handling in full-stack applications. MongoDB is particularly effective in real-time analytics, content management systems, and IoT platforms due to its speed and flexibility.

INTRODUCTION

The project "**FindMyHome – A Smart Room Rental Platform**" is a forward-thinking initiative aimed at transforming the rental housing experience in India. With the rising urban population and increasing demand for affordable rental spaces, the platform seeks to address key challenges such as broker dependency, lack of verified listings, and fragmented property information. It envisions a centralized, user-centric solution that connects property owners and tenants directly, ensuring transparency, convenience, and trust in the rental process. FindMyHome caters to a wide range of users including students, working professionals, bachelors, and families by offering tailored property collections and customizable search filters. Users can explore rental options based on their preferences such as property type, budget, furnishing status, and availability. The platform also enables owners to list properties effortlessly, making it easier to reach potential tenants without intermediaries. By promoting a secure, reliable, and accessible environment, the platform not only enhances the property discovery experience but also builds a trusted ecosystem for both tenants and property owners. Ultimately, FindMyHome aims to redefine how people search for and manage rental accommodations—making the process smoother, more efficient, and aligned with the evolving needs of India's diverse housing market

Shriram Housing loan-book grows 45% to cross Rs 5,000-crore so far this fiscal

Had it not been for the third wave and the resultant curbs on our operations, which impacted collections, the AUM would have already crossed the Rs 5000-crore-mark in December as planned. This also will impact the annual target of Rs 5,500 crore of live loans, and we should now be closing the year.
